Cybersecurity for Everyday Life

Digital devices and online services are integral to our daily lives, making tasks easier and more convenient. However, with these advancements come new threats, such as scams, data breaches, and cyberattacks, which can lead to financial losses and jeopardize personal information. So, it's crucial for everyone to know how to protect themselves from these risks.

Master Essential Cybersecurity Skills with Our Game and Portal.

Cyber Citizen is an EU-funded initiative to help all Europeans securely utilise digital services and devices. It has now introduced two engaging tools designed to support everyone's cybersecurity skills in a fun and accessible way:

Cyber City Tycoon

Cyber City Tycoon is a free game available on mobile devices or through the Cyber Citizen portal. Playing as a cyberscammer gives an insight to what the criminals are trying to do and helps the player spot cyberthreats in daily life. The game's engaging style makes learning about cybersecurity easy and enjoyable, especially for younger users, and also invites players to dive deeper into cybersecurity topics through the SecPort portal.

Secport

Secport is an online portal that helps recognise and defend against common cyber threats in everyday life. It includes essential cybersecurity information in different formats such as courses, articles, videos, guides, games, and a glossary. Created with input from cybersecurity experts across Europe, SecPort offers trustworthy, accessible information to keep users informed and protected.
